

# LIFE TACKLE: Teaming up for A Conscious Kick for the Legacy of Environment

The world of football can play a crucial role in preserving the environment. With LIFE TACKLE, football matches will become more environmentally sustainable, for example reducing waste and increasing recycling rates in stadiums, improving energy consumption and finding greener transport solutions.

Football clubs, stadium managers and supporters can all play a role. This is why LIFE TACKLE is developing guidelines and best practices to share across Europe in close cooperation with all people involved in the organisation and running of sport events. A set of strategies and tools will therefore be developed to increase the competence and awareness of the involved partners.

LIFE TACKLE will also help ensure the EURO 2020 championship is more sustainable and that all National Football Associations in Europe find solutions to their environmental challenges.

## LIFE TACKLE is implemented by...

### BELGIUM

Associations of Cities and Regions for sustainable Resource management - ACR+

### ITALY

Multiservice Company for Urban Sanitation - AMIU Genova  
Italian National Football Association - FIGC  
Sant'Anna School of Advanced Studies

### PORTUGAL

Intermunicipal Waste Management of Greater Porto - LIPOR

### ROMANIA

Romanian National Football Association - FRF

### SWEDEN

Swedish National Football Association - SvFF

### UK

EURACTIV.COM LTD

The project is supported also by UEFA
